(54) SIGNAL CHANGE-OVER CIRCUIT

(57)Abstract:

PROBLEM TO BE SOLVED: To prevent a crosstalk and to reduce a substrate area without respectively inserting earth patterns between a plurality of input signal lines in a pattern generating form.

SOLUTION: This signal change-over circuit selectively changes-over an S video signal inputted to an S input terminal 5 and a composite video signal inputted to a composite input terminal 6 by an input change-over switch part 2 and outputs them. In this case, signal lines 15, 17 and 18 for prolonging the composite video signal inputted to one composite input terminal 6 and a Y/C-separated Y signal and a C signal are arranged side by side in a mutually interposed form between the signal lines 13 and 14 on the substrate for prolonging the S video signal which is inputted to the other S input terminal 5 and switches 24, 26, 28, 25 and 27 which open and close by linking with the input change-over switch part 2, closed at the signal non-selection and short-circuited to the ground are respectively connected to the signal lines 13, 14, 15, 17 and 18.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's

decision of rejection]
